SUPPLEMENT TO
REPORT NO.

25X1X

- Construction of permanent barracks approximately eight kilometers west of the Küstrin-Kietz railroad station has been started by a Brandenburg firm. Men in the area are being drafted for labor. According to Russian workers, the camp is intended for troops "formerly stationed in Poland".

- Ordered by the SMA, a bombproof bunker 20-30 meters deep has been built into a chalky mountainside near Rüdersdorf. It is alleged that the shelter will be used by the Soviet high command staff in Germany in the event of war.

New armored troops, estimated at one or two regiments, have arrived in Falkenberg and vicinity. They are equipped with T-34 tanks. It is rumored that they came from Brandenburg or the Brandenburg-Mecklenburg border.

- On 28 June, Soviet troops believed to consist of one rifle division arrived in the Querfurt-Micheln (D71-D80) area, which previously had been held only by a Kreis komendatura staff. The arrivals are said to hail from Cottbus. Unverified reports state that Schloss Querfurt houses a general and his staff, that Micheln contains 1,000 riflemen, and that a horse-drawn artillery unit is in Neusdorf (D71).

- a. On 29 and 30 June, three trains were unloaded at Naumburg station. Each

train carried twelve 85 mm AA guns on swivel mounts. These were taken to Naumburg's Hubertus Barracks.

b. A German carpenter employed by the Soviet engineer battalion in Naumburg states that he is making wooden mine containers, 280 x 320 x 150 mm, which are filled with TNT by the Russians. Three kilos of explosives are placed in those intended for use against cars, six kilos in those to be used against tanks. The pressure or pressure-release firing pin is placed in a tube approximately 80 mm long and 10 mm thick and made of bakelite or similar material. Approximately 150 mines per week are used at the engineer training area in Bad Kösen (J78).
